

Automation Engineer for Chemical Plants (m/w)

Who we are:

We are a young, research-based high-tech company headquartered in Allerheiligen bei Wildon. With innovative technology, we make chemical and industrial processes more efficient. We are developing intensified continuous chemical processes for our customers, from fine chemical and pharmaceutical industry, and deliver the corresponding plants from lab to production scale.

Who we are looking for:

To strengthen our engineering team, we are looking for an automation technician with experience. The main tasks are in the areas of:

- Development of new automation concepts
- Project management in field automation
- Cooperation with suppliers in the field of automation
- Coordination and assisting in electrical installations and electrical design

We are expecting:

We are looking for a highly motivated and team-oriented personality with a university degree/diploma of higher education or a plant technician with experience in automation technology. Relevant experience in the field of chemical, pharmaceutical, or general continuous systems is an advantage

- Experience in the PLC – programming
- Independent working
- Communication skills
- Analytical and solution-oriented thinking
- Reliability and high level of responsibility and flexibility
- Good command of English, basic knowledge in German
- Interested in innovative technologies and engineering
- Good knowledge of Microsoft Office

We are offering:

We offer an interesting and varied work in a young and dynamic team with industry-standard wages. Your future position is located in a company with high growth potential.

Please send your written application with the usual documents and photo to:
